## A fully integrated E-Commerce solution.

As the premier development partner for AbleCommerce, Western Computer has taken this leading e-commerce solution and integrated it with Dynamics NAV – to offer you:

- A robust, stand-alone application with features that align closely with Microsoft Dynamics NAV.
- A flexible solution that can be highly customized to your specific needs.
- E-commerce that operates independent of your ERP system in a developer friendly environment.
- A solid content management system that allows for easy administrator maintenance.
- An affordable price solution that is fully Payment Card Industry (PCI) compliant.

Together, Microsoft Dynamics NAV and AbleCommerce give you a fully integrated e-commerce solution for B2B, B2C and employee portal functionality.

## Robust technology designed for flexibility.

AbleNAV is a stand-alone solution that doesn't have to reside on the same network as Dynamics NAV. All communication is orchestrated using web services, to allow for a service-oriented architecture. Integration is built into the AbleNAV dashboard and all data is synchronized between Dynamics NAV and AbleCommerce. This gives you a robust shopping cart that operates independently of your ERP system, so that even when your ERP system isn't available, you can take orders and conduct business online. When the ERP system is available, synchronization continues and you never lose critical business data.

The AbleNAV solution scales from small organizations that need a simple shopping cart using prebuilt templates to large enterprise solutions serving B2B, B2C and B2E users. And, all integration can be fully customized almost without limits, thanks to the programs open model and the fact that the source code is available for purchase.

## Give your customers everything they need to enjoy their buying experience.

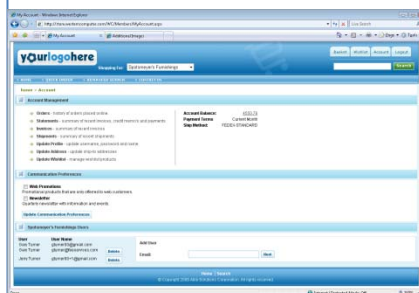

Whether you are selling B2B or B2C, with AbleNAV your customers get easy access to your products in an exciting, user friendly environment. They can view your products in an unlimited number of categories and subcategories, complete with product information, pictures, extended item descriptions and related accessories.

Your product and category descriptions are stored in the Microsoft Dynamics NAV tool box and AbleNAV's document management system handles all the information your customers need to decide to buy – from brochures to videos to software that can be downloaded directly from your website.

## Give your business processes seamless integration.

With AbleNAV, you manage your e-commerce from Microsoft Dynamics NAV, with no additional web development resources. So new product prices are deployed quickly and cost-effectively. Items can be shown in multiple categories throughout your site, all controlled through Dynamics NAV.

Your key customers can also have access to the information you want to share from your Dynamics NAV database, including the status of all orders they have placed, whether online or off. That means you have the option to share critical information with key customers directly from your Dynamics NAV database.

## Give your sales a secure and reliable flow.

AbleNAV's "Always Take Orders" (ATO) technology ensures that your customers get real time item and pricing information, even when the connection to your back-end system is lost. And, once the connection to your Dynamics NAV database is restored, most orders are automatically retrieved and processed. ATO is also designed to virtually eliminate bottlenecks and performance disruptions, so your website serves customer 24-7!
